2 Summary of the Review of Consents................................. 1
3 Conclusions.................................................................. 1
1 Introduction

This Addendum report provides a Review of the Consents data provided by the Environment Agency (EA) which at the time of writing of the Habitats Regulations Appraisal (HRA) of the Deposit Local Development Plan in January 2011 had not been received.

2 Summary of the Review of Consents

The EA is responsible for issuing permissions including licences to authorise abstraction of water and consents to authorise discharges. The EA is required to ensure that permissions and activities do not have a potential adverse effect on the integrity of European Sites. This Review of the Consents data prepared by the EA was undertaken to determine whether there could potentially be incombination effects with the Pembrokeshire LDP. The Review of Consents data for each European Site was requested from the EA Wales but not all documents requested were received. Therefore, the assessment has utilised the most appropriate information at the time. The EA has provided information for the following sites:

- St. David’s SAC
- Ramsey and St David’s Special Protection Area (SPA)
- Stokholm and Skomer SPA
- Limestone Coast of South West Wales SAC
- Castlemartin Coast SPA
- Pembrokeshire Bat Sites and Bosherton Lakes SAC
- Afonydd Cleddau SAC
- Pembrokeshire Marine SAC

The Review of Consents for each European site is subdivided into the relevant consents and Table 1-1 provides the conclusion in relation to each type of consent.

3 Conclusions

The Review of Consents has demonstrated that for almost all sites the consents there are no risks to the integrity of European sites. However, adverse effects on integrity could not be ruled out on the Afonydd Cleddau SAC as a result of water abstraction licences. These were therefore recommended to proceed to Stage 4 options appraisal, where the options are either affirmation, variation or revocation of an abstraction licence. The results of this process were not available for this HRA.

For the Stokholm and Skomer SPA, the Limestone Coast of South West Wales SAC and the Pembrokeshire Bat Sites and Bosherton Lakes SAC, further air quality assessment was recommended at Stage 4. The results of this air quality assessment were not available for this HRA.

There will be zero effects on these sites as a result of the implementation of the Pembrokeshire LDP and, therefore, no incombination effects.

<td>Stockholm and Skomer SPA</td>
<td>Documents provided by the EA Wales indicate that all existing permissions have no adverse effects on the integrity of the site. However, since production of the Appendix 21 document, CCW has added the short-eared owl as a SPA feature that is considered potentially sensitive to the effects of air pollution. Therefore, the EA Wales revisited the review process to include an Air Pollution Assessment for the short-eared owl. Due to the lack of data and information about the short-eared owls breeding and foraging habits in the SPA, it cannot be concluded that the most sensitive minimum acid critical load is not exceeded for the SPA. The report recommended that EA regulated long range sources of NOx and SOx are taken forward to Stage 4 options appraisal for Stockholm and Skomer SPA in relation to potential exceedance of the acid critical load. Results of this assessment have not been provided by the EA Wales to include in this report.</td>

<td>Afonydd Cleddau SAC</td>
<td>Not applicable</td>
<td>Detailed assessment of thirteen abstraction licences demonstrated that six would not have a significant impact on the integrity of the Afonydd Cleddau SAC. However, 7 licences were deemed to have the potential to impact upon the integrity of the Afonydd Cleddau SAC. Therefore, these abstractions were progressed to Stage 4 options appraisal. Results of this options appraisal are not available.</td>
