Pembrokeshire County Council Employment Land Survey

Summary of the outcomes from the 2011 survey and comparison of the 2011 data with the outcomes from previous surveys (2000, 2003, 2005, 2007 and 2009)

1 Introduction

- 1.1 Pembrokeshire County Council has undertaken a number of employment land surveys over the last 10 years, the earliest of which was in 2000 and the latest in 2011. Since 2003 the surveys have been conducted on a biennial basis and the tables that follow present information from the 2003 survey and all subsequent surveys. The current Development Plan, the Joint Unitary Development Plan for Pembrokeshire, was adopted in 2006 and therefore the 2007 survey was the first to recognise the full portfolio of employment sites allocated by that plan.
- 1.2 The survey work records sites that are allocated for employment purposes by the adopted Development Plan, together with sites that have attracted a planning consent since the previous survey. Employment developments are taken as being those in Use Classes B1, B2 and B8, together with Use Class A2 offices.
- 1.3 The survey has two elements to it:
 - a) A consideration of land on 'new' sites – identifying areas of land developed since the previous survey and the residual of land that remains undeveloped; and
 - b) A consideration of land on 'existing' sites – sites that have already been developed, but within which some land may have become disused and is therefore available for future employment use.
- 1.4 The survey does not present a comprehensive list of all available employment land within the local planning authority area (the County of Pembrokeshire excepting the National Park). However, it has and will continue to be populated with new information with each new survey and currently provides information on the majority of employment sites in the Council's planning area.
- 1.5 The information gleaned from the survey work is useful to the County Council as a baseline to inform aspects of Local Development Plan preparation. It can also be a material consideration in the consideration of planning applications, contributing to the decision making process where appropriate. Furthermore, it can be helpful to prospective developers as it identifies sites that have attracted planning permission and / or are allocated for employment purposes.

1.6 This report summarises the findings regarding employment land availability across the Council's planning area and also presents settlement-specific information on the towns defined as 'main settlements' by the Joint Unitary Development Plan for Pembrokeshire (the adopted Development Plan – often known as the JUDP) – these being Haverfordwest, Milford Haven, Neyland, Fishguard and Goodwick, Pembroke and Pembroke Dock. A further section presents the situation in the smaller settlements and on sites in the countryside.

2 Overview of what has happened between 2007 and 2011

2.1 At the start of this two year period (July 2007), the economy was buoyant, but since then it has moved into recession with a consequent downturn in activity. In the later part of this two year period there has been an upturn in activity, but there is considerable uncertainty over whether or not this will be sustained in the longer-term. The period of growth at the start of this period was particularly important in Pembrokeshire, as it coincided with construction work on a number of major projects, including two LNG terminals and the Bluestone visitor centre. At the base date for the survey construction phase work continues on further major projects, notably the new Pembroke Power Station, but other areas of the economy have exhibited the effects of the downturn.

2.2 One of the features of the economy in Pembrokeshire is that, with the exception of major energy and port related 'national interest' schemes, much of the business activity is smaller scale and involves small and medium sized enterprises, other than the occasional major project, such as Bluestone. This manifests itself in the survey results in the form of a few large sites (generally related to the Milford Haven Waterway or to Haverfordwest) and elsewhere a greater number of much smaller scale sites (some of which are micro-sites for home-based working) supporting a more modest scale of business activity and aspiration, but that collectively makes a crucial contribution to the economy of the County.

2.3 The information from these surveys provides the County Council with baseline evidence

- to inform policy development for planning and economic regeneration.
- to provide context alongside the adopted Development Plan (the JUDP), for evaluating individual planning proposals that are submitted as planning applications as a material consideration in decision making on planning applications.

3 Tabular representation of the survey results

- 3.1 The purpose of Tables 1 and 2 is to provide comparative data based on the employment land availability survey results from 2003, 2005, 2007, 2009 and 2011 for JUDP allocations (Table 1) and for sites not allocated in the JUDP (Table 2). Two types of change can be identified from the tables – those to the total site areas at specific locations and those to the amount of undeveloped land (sometimes including buildings) – in other words the availability of employment land for future development). In a few cases the expiry of planning permissions on unallocated and partially allocated sites has resulted in significant reductions in available land. Site areas are checked on a survey-by-survey basis and often vary between successive surveys.
- 3.2 Following Tables 1 and 2 there are two further tables, providing summarised information on employment land availability and changes to the hectarage of undeveloped land and buildings.

Table 1

Summary of findings – JUDP sites in Pembroke and Pembroke Dock (including the former Pembroke Power Station site)

There is one large site within this group of sites – at the former Pembroke Power Station, which is slightly less than 200 hectares. The remaining sites are in a range of sizes from just under 23 hectares to just over 3.5 hectares. The key change between 2009 and 2011 has been at the former Pembroke Power Station site, where a new power station has been developed. Aside from this, there has been little change in relation to available land on the JUDP allocation sites, with 25.56 hectares of land available in 2011. Excluding the former Pembroke Power Station site, land availability on other sites was 28.70 ha (2003), 24.74 ha (2005), 25.48 (2007) and 25.56 (2009).

Summary of findings – JUDP sites at Haverfordwest including Merlins Bridge and Withybush

This group of sites, most of which are at Withybush, range in size from just over 14 hectares to just under 1 hectare. Generally, there has been little change in availability of land between 2009 and 2011 with the most significant change being at the site Withybush Business Park Extension and North of the Business Park where slightly more than 1/2 hectare of land has been developed. In 2011 a total of 17.82 hectares of land remained available across these sites. This compares with 36.62 ha (2003), 36.15 ha (2005), 34.34 ha (2007) and 33.08 ha (2009).

Fishguard, Goodwick, Scleddau and Trecwn

Summary of findings – JUDP sites at Fishguard, Goodwick, Scloddau and Trecwn

This group of sites ranges in size from just over 21 hectares (at Trecwn) to just over half a hectare. Significant changes for this area between 2007 and 2011 include:

- Reduction in land availability at Trecwn as a result of the expiry of a planning consent for major development;
- Celtic Link Business Park, with the change achieved through incremental development.

At 2011 a total of 34.25 hectares of land remained available across these sites. This compares with 41.37 ha (2003), 230.37 ha (2005), 226.28 ha (2007) and 34.41 ha (2009), with the 2005 and 2007 figures being significantly different from the others because of the consenting situation applying at those dates.

* Part of this site is within the Pembrokeshire Coast National Park (the residual outside the NP boundary is estimated at 59.70 hectares)

Summary of findings – JUDP sites at Milford Haven and Waterston, including the South Hook LNG terminal

This group of sites ranges in size from the South Hook LNG terminal site at just under 210 hectares (part of which is in the National Park) to just over 1.5 hectares. Aside from the South Hook site, the largest site is just over 22 hectares, at Thornton Industrial Estate. The biggest change in availability was between 2005 and 2007, reflecting construction of the LNG terminal at South Hook. Significant change for this area between 2007 and 2011 includes:

- the Thornton Industrial Estate, incremental development.

In 2011 a total of 19.14 hectares of land remained available across these sites. This compares with 233.75 ha (2003), 233.75 ha (2005), 23.64 ha (2007) and 21.69 ha (2009). The big change between 2003 and 2005 in comparison with 2007 and 2011 is largely attributable to development of the LNG terminal at South Hook.

Neyland and Honeyborough

Summary of findings – JUDP sites at Neyland and Honeyborough

This small group of sites comprises two sites at Honeyborough and a smaller site at Brunel Quay. There has been minimal change in availability between 2009 and 2011. In 2011 a total of 10.24 hectares of land remained available across these sites. This compares with 4.52 ha (2003), 9.89 ha (2005), 10.22 ha (2007) and 10.31 ha (2009).

Summary of findings – JUDP sites at Narberth

There is a single site at Narberth, the size of which has slightly diminished since 2003, most notably between 2003 and 2005 when a portion was re-designated for community use (a new primary school, which is now built). In 2011 9.40 hectares remained available for development.

Summary of findings – other JUDP sites

Elsewhere a further 6 sites are allocated by the JUDP for employment, at Carew in the south of the County, Johnston in central Pembrokeshire and at Brawdy and Crymych in the north of the County. The largest site is at Carew, this being just under 9 hectares, with the smallest being at Johnston at just over 2 hectares. The Crymych site is complex, as part is a JUDP allocation (also consented) but a larger area is consented but doesn't have a JUDP allocation. In 2011 the Crymych site is under construction.

In 2011 a total of 9.33 hectares of land remained available across these sites. This compares with 16.45 ha (2003), 17.04 ha (2005), 14.97 ha (2007) and 15.60 ha (2009).

Summary of findings – non-JUDP sites at Pembroke and Pembroke Dock (including the Chevron Refinery)

This group of sites includes the Chevron Oil Refinery, whose site area is currently estimated at 215 hectares and is fully in use. The other ten sites are on a much smaller scale, including eight micro-sites of less than 0.2 hectares. The Chevron site has been fully in use throughout the monitored period.

In 2011, only 0.02 hectares of land remained available across these sites. This compares with 3.10 hectares (2003), 0.00 ha (2005), 0.02 ha (2007) and 0.06 ha (2009).

Summary of findings – non-JUDP sites at Fishguard and Goodwick

The seven sites in this group are all of small size, the largest being of just over 1.8 hectares and the remaining six of less than 0.2 hectares. In 2011 1.09 hectares of land remained available across these sites, mostly on the former Dewhirst Factory site. This compares with 1.04 ha (2003), 1.05 ha (2005), 0.98 ha (2007) and 1.18 ha (2009).

Summary of findings – non-JUDP sites at Milford Haven (including Milford Haven Refinery and Petro Plus / Dragon LNG)

The eight sites in this group include the Milford Haven Refinery (123.7 hectares), the Petro-Plus / Dragon LNG site (177.2 hectares), a pipeline development site (41.98 hectares, with elements on the north and south shore of the Milford Haven Waterway) and five smaller sites, each of less than 0.5 hectares.

In 2011 no available employment land remained across these sites. In 2003 and 2007 no land was available, while the 2005 survey recorded 0.07 hectares as available and 0.11 hectares available in 2009 .

¹ This site has a north and south shore element. One element is found in the the Milford Haven and Waterston area, the other close to Pwllcrochan and largely overlapping with the Pembroke Power Station site. The 41.98 hectare site area is split between the two elements.

Summary of findings – non-JUDP sites at Neyland and Honeyborough

The four sites in this group are all of small size, the largest being 0.87 hectares and the other three less than 0.2 hectares. In 2011 only 0.03 hectares of land remained available across these sites. In 2003 and 2005 no land was available at these sites, while in 2007, 0.01 hectares was available and in 2009 0.4 hectares was available.

Summary of findings – non-JUDP sites at Narberth

There are ten sites in this group, with the largest being just under 2.5 hectares.

In 2011 there was no available employment land remaining across these sites. This compares with 0.03 ha (2003), 0.27 ha (2005), 0.78 ha (2007) and 0.19 ha (2009).

Summary of findings – non-JUDP sites at other locations

There are fifty six sites in this group, demonstrating the range of locations across the County at which employment activity takes place and the abundance of small scale employment sites. None of the listed sites exceeds 5 hectares in size and the majority (31) are of 0.2 hectares or less.

In 2011 a total of 4.78 hectares of land remained available across these sites. This compares with 2.77 ha (2003) and 5.63 ha (2005) 5.83 ha (2007) and 7.07 ha (2009).

Aggregated summary of findings: Table 3

Employment land availability

This table aggregates permissions and allocations and presents totals for overall employment land availability for each of the years 2003, 2005, 2007, 2009 and 2011. 121 sites have been identified in total, with the most significant changes being attributable to the developments on major sites adjoining the Milford Haven Waterway at South Hook LNG and Pembroke Power Station and the granting and subsequent expiry of planning permission at Trecwn. Other changes in land availability are modest in comparison with these.

<i>Site type and location</i>	<i>Number of sites in group</i>	<i>Land available 2003 (hectares)</i>	<i>Land available 2005 (hectares)</i>	<i>Land available 2007 (hectares)</i>	<i>Land available 2009 (hectares)</i>	<i>Land available 2011 (hectares)</i>

Totals	121	575.42	765.68	549.40	159.12	124.14

*Includes one site that is partially within the Pembrokeshire Coast National Park (in 2011 this site had an area of 201.00 hectares, of which 59.70 hectares was outside the National Park boundary)

Changes to the hectarage of undeveloped land and buildings

The table below sets out the changes to undeveloped land and buildings for 2003, 2005, 2007, 2009 and 2011. It incorporates changes from the development of land over successive survey periods, together with changes to site areas and site status (for instance due to new or amended allocations and / or new renewed or expired consents). It is therefore not a pure indication of land take-up. As with the table above, the biggest influences on the overall figures are the developments on major sites adjoining the Milford Haven Waterway at South Hook LNG and Pembroke Power Station and the granting and subsequent expiry of planning permission at Trecwn.

<i>Site type and location</i>	<i>Number of sites in group</i>	<i>Changes to undeveloped land and buildings 2003 to 2005 (hectares)</i>	<i>Changes to undeveloped land and buildings 2005 to 2007 (hectares)</i>	<i>Changes to undeveloped land and buildings 2007 to 2009 (hectares)</i>	<i>Changes to undeveloped land and buildings 2009 to 2011 (hectares)</i>
